

**DATA SHEET**

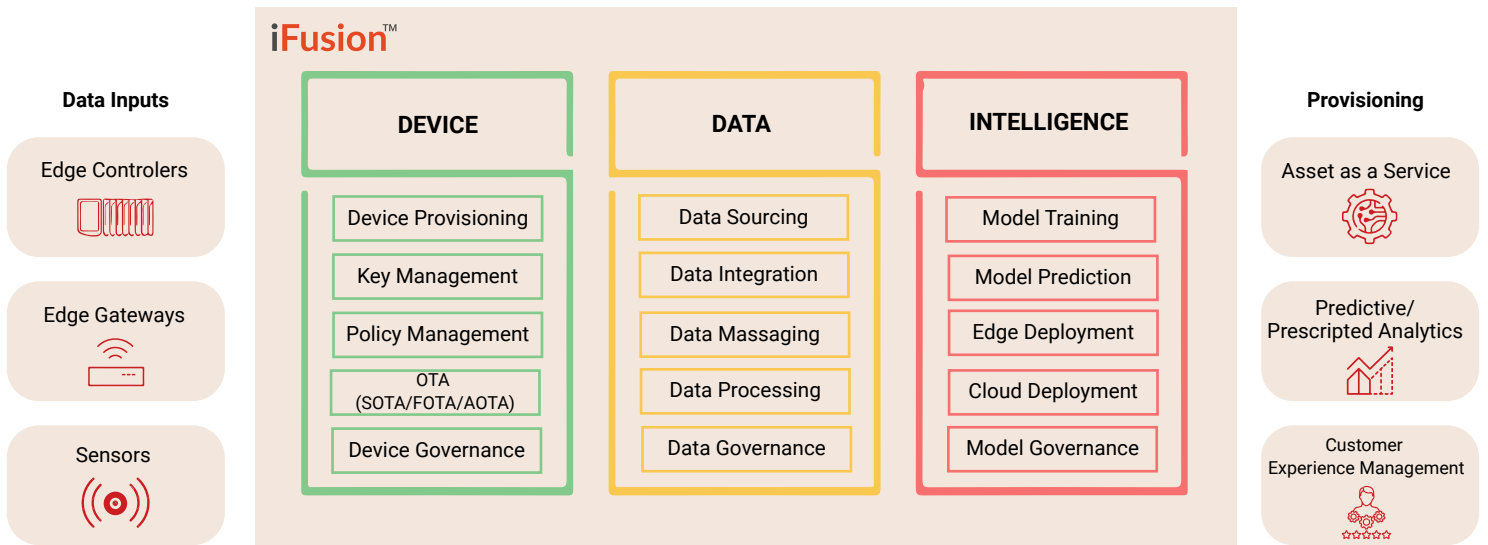

# **iFusion™ Edge**

**Unleash the power of your data at the edge – fast, secure and at scale**

## Business Challenges

With more connected devices acting as data touchpoints, businesses are increasingly relying on automated, data-driven decision making. This demands the need to process huge magnitudes of data effectively and in real-time to ensure effective functioning. But there is a major bottleneck – latency. Mission critical scenarios such as autonomous driving or robot-assisted surgeries need split-second decision that is far faster than any cloud computing solution can provide.

**iFusion™ Edge** autonomizes machine behavior with immediate actions to serve mission critical scenarios with real-time insights and faster decision making.

## Key Benefits

-  Highly responsive, ultra-low latency insights
-  Reduced bandwidth costs with inferencing at the edge
-  Greater security with minimized data exposure and tampering risk
-  Lower costs by decoupling storage from processing once streaming ends

## About Innominds

Innominds is an AI-first, platform-led digital transformation and full cycle product engineering services company headquartered in San Jose, CA. Innominds powers the Digital Next initiatives of global enterprises, software product companies, OEMs and ODMs with integrated expertise in devices and embedded engineering, software apps and product engineering, analytics and data engineering, quality engineering, and cloud and devops, security. It works with ISVs to build next-generation products, SaaSify, transform total experience, and add cognitive analytics to applications.
